

Sheryl Goss, MS, RT(R)(S), RDMS, RDCS, RVT, RVS, FSDMS

Immediate Past President, SDMS Board of Directors

Sheryl is the Chair of Diagnostic Medical Sonography and an Assistant Professor at Misericordia University in Dallas, Pennsylvania. In addition to her volunteer time with the SDMS, she has been an officer of her local ultrasound society for 15 years, an educator for 17 years, a sonography department supervisor for 23 years, and also works with a local veterinarian performing echocardiography and assisting in interventional procedures.

Her degree in Radiologic Technology is what led Sheryl to sonography. "After graduation, I began working in the radiology department. Keep in mind, at this time, CT and MRI were not available and everyone relied on diagnostic x-ray. After a year of working as a radiologic technologist, the department manager asked me if I wanted to cross train into ultrasound," said Sheryl. "I didn't know much about ultrasound, but I knew that I could see the image on a monitor before it was developed, which I could not do with x-ray. It was always a mystery what the quality of the x-ray would be before it came out of the developer, and I quickly said yes to this new modality. The rest is history and I have been blessed with my decision to become a diagnostic medical sonographer. I love being able to learn all the time and sonography provides me that opportunity. I am proud to celebrate both my wedding anniversary and sonography anniversary in the same year."

Sheryl holds an Associate, Bachelor of Science, and a Master of Science from College Misericordia.
