EdPro Library

Your Partner in Sonography Education™

Program Challenges

Diagnostic medical sonography programs operate in an increasingly complex environment:

- Expanding enrollment demand
- Faculty recruitment and retention challenges
- Heightened accreditation expectations

Programs must maintain quality and accreditation readiness while managing limited faculty capacity.

EdPro Library Solution

Developed by the Society of Diagnostic Medical Sonography (SDMS), the professional association representing sonographers and sonography students, the EdPro Library is a curated video resource designed to support diagnostic medical sonography programs.

It provides a scalable way to strengthen instructional resources without increasing faculty staffing costs. Programs use EdPro Library content to supplement lectures, support scan lab preparation, and provide structured student review resources.

Institutional Impact

The EdPro Library supports institutional priorities across three key areas:

Faculty Capacity & Instructional Consistency

- Supports new and experienced educators with curriculum development
- Allows educators to focus time and energy on high-impact student experiences
- Standardizes foundational concepts across cohorts

Student Learning Support

- Reinforces concepts through on-demand review
- Supports varied learning styles
- Supplements classroom and scan lab instruction
- Encourages independent learning behaviors
- Supports accessibility by providing a transcript for every video

Cost Containment & Program Scalability

- Expands instructional resources without additional faculty positions
- Predictable institutional cost model
- Enhances curriculum delivery without new infrastructure
